

DISTRIBUTION DESIGN, ENGINEERING SUPPORT, AND CUSTOMER OUTREACH

IRBY PROVIDES DESIGN, CUSTOMER OUTREACH, CONSTRUCTION, AND PERMITTING FOR MODERN DISTRIBUTION SYSTEMS

Many distribution systems are burdened by stress that exceeds their original design standards. Irby Construction is actively working with utilities to update, optimize, and harden their systems against further damage. These advancements reduce the number and duration of outages for customers.

Partner with Irby to design, implement, and construct end-to-end overhead and underground distribution solutions.

From design and customer outreach to construction and finishing, Irby's turnkey solutions can be implemented without disruption. Our services include:

- Design for reconductors, new home service, switchgear, outdoor lighting, and distribution systems for subdivisions
- Customer outreach for construction approvals
- Easement and Land Acquisition
- Feeder and lateral hardening
- Overhead to Underground Lateral Conversion
- Overhead to Underground Service Conversion
- Project Management
- Damage Assessment
- CAP Bank Replacements
- Recloser Replacements

POWER FOR TODAY AND TOMORROW

Irby has built over 150,000 miles of distribution and low-voltage transmission lines. Our work includes projects that are overhead, underground, energized, aerial, inaccessible, straightforward, or straight through neighborhoods and towns. We are proud to work together with utilities to support reliable power delivery for their customers. We're designing, building and maintaining a grid that supports the demands of today and tomorrow.
