

POWERFUL SOLUTIONS

IRBY CONSTRUCTION BUILDS INFRASTRUCTURE FOR THE POWER INDUSTRY.

Our portfolio of projects spans more than 70 years and a broad spectrum of services including: transmission, distribution, substation, renewable, emergency restoration, foundation, outdoor lighting, and telecommunication projects.

THE PURSUIT OF POWERFUL SOLUTIONS. THE PROMISE OF PERFORMANCE.

The experience Irby offers clients is directly shaped by the collective experience inside the Irby family. The tenure of the team is a testament to the working environment and a key ingredient to the company's ability to serve clients with accurate estimates, timely field production, and innovative solutions.

OVERVIEW OF SERVICES

TRANSMISSION

Irby Construction is most known for building long line transmission projects. Irby crews built much of the country's original power grid—stringing over 200,000 miles of line from coast to coast and internationally. There is no transmission project too long or terrain too tough for Irby.

SUBSTATION

Turnkey engineering, procurement, and construction (EPC); upgrades; and interconnection. Irby can handle any part of the substation construction process from site preparation to energizing. Irby builds substations of all shapes and sizes for municipalities and investor-owners.

DISTRIBUTION

Above or below ground, maintenance or removal, Irby's distribution construction and repair services cover a complete scope of work. Working in areas where people live and work, is close to the heart of our crews. It connects us to the communities our labor ultimately serves.

EMERGENCY RESTORATION

Irby has the manpower, the equipment, and the commitment to mobilize a restoration effort in the wake of an outage. Irby crews are always ready and willing to pack their bags and caravan their way into areas that are dark and devastated.

FOUNDATIONS

Irby's foundation services are a perfect example of our turnkey scope of services. From site work to large pier-drilling foundations and slabs that support massive tower infrastructure, foundation work is one of Irby's most specialized areas of expertise.

UNDERGROUND

Underground services include conduit, HDPE, pad-mounted equipment, and cable along with primary and secondary terminations. Directional boring services are perfect for the conversion of overhead lines to underground or upgrading existing systems.

RENEWABLES

Renewable energy installation is the next generation of our business. Irby applies experience in traditional power construction to interconnect and construct renewable generation for utilities and investor clients developing sustainable solutions including wind farms, solar energy facilities, and geothermal power plants.

OUTDOOR LIGHTING

Irby is well equipped with the skills and fleet to install, upgrade, and repair outdoor lighting systems. Steel towers and working with electric power have always been at the core of Irby's business.

TELECOMMUNICATIONS

Irby serves fiber, wireline, and wireless clients building and maintaining cell sites from the ground up. Leveraging geographic reach, manpower and equipment, the company can build multiple sites concurrently — therefore allowing us to promise telecom clients the tight timelines they often require.

TRUST US. OUR PEOPLE KNOW POWER.

Most of the leadership team at Irby started their careers in the field. In fact, people at every level of this company are prepared to be in it with you when a challenge occurs on the job.

In this business, there are hurdles. The team you're working with makes all the difference in the distance between the peaks and valleys. No matter the obstacle, Irby will get it done.

FOR SAFETY'S SAKE

Safety is more than a priority in our company. Safety is at the center of our company value system and present in everything we do.

Our family culture also amplifies our commitment to safety. There's a brotherhood among many of our crews. The depth of the bonds shared and the length of time we've been working together strengthens our personal commitment to each other and to safety overall. We often say, "we are our brother's keeper."

QUANTA SERVICES

Irby Construction is a wholly-owned subsidiary of Quanta Services. That means Irby clients get the personalized service and accessibility we're known for along with the stability and resources of a Fortune 500 organization.

When you work with Irby, you also gain access to the knowledge and resources of more than 60 Quanta Services organizations with which we often collaborate to provide an unparalleled scope of services and workforce.
