IRBY
CONSTRUCTION

A QUANTA SERVICES COMPANY

IRBY CONSTRUCTS, INSTALLS, INSPECTS, UPGRADES AND MAINTAINS ELECTRIC POWER & TELECOMMUNICATIONS INFRASTRUCTURE.

Irby Construction offers turnkey underground installation, maintenance, and emergency restoration services for new construction and retrofit projects. We serve clients in the utility and telecommunication industries with a comprehensive scope of work in central business district, suburban, and rural areas for residential and commercial projects.

Electric, water, sewer, gas, and telecom utilities call on Irby for residential and commercial projects. Our scope of work includes:

- Directional drilling
- Gas: transmission and distribution construction
- Underground electric distribution
- Underground electric transmission
- Copper and fiber optic cable installation
- Switching energized cable — primary and secondary
- Manhole and hand hole installation: precast, retrofit and poured-in-place applications
- Conduit/duct bank installation
- Splicing copper and fiber
- Emergency and service outage response
- Water and sewer: forcemain and gravity applications

THE POWER OF OUR RESOURCES

We have the manpower, equipment, and geographic reach to serve diverse client needs and deliver on even the tightest timelines. Of all the resources we make available on the job site, our most important offering is perhaps years of experience and lessons learned. Our expertise supports our ability to work safely, efficiently, and effectively to deliver our projects on time and under budget.
