

RENEWABLES

IRBY CONSTRUCTS, INSTALLS, INSPECTS, UPGRADES AND MAINTAINS ELECTRIC POWER INFRASTRUCTURE.

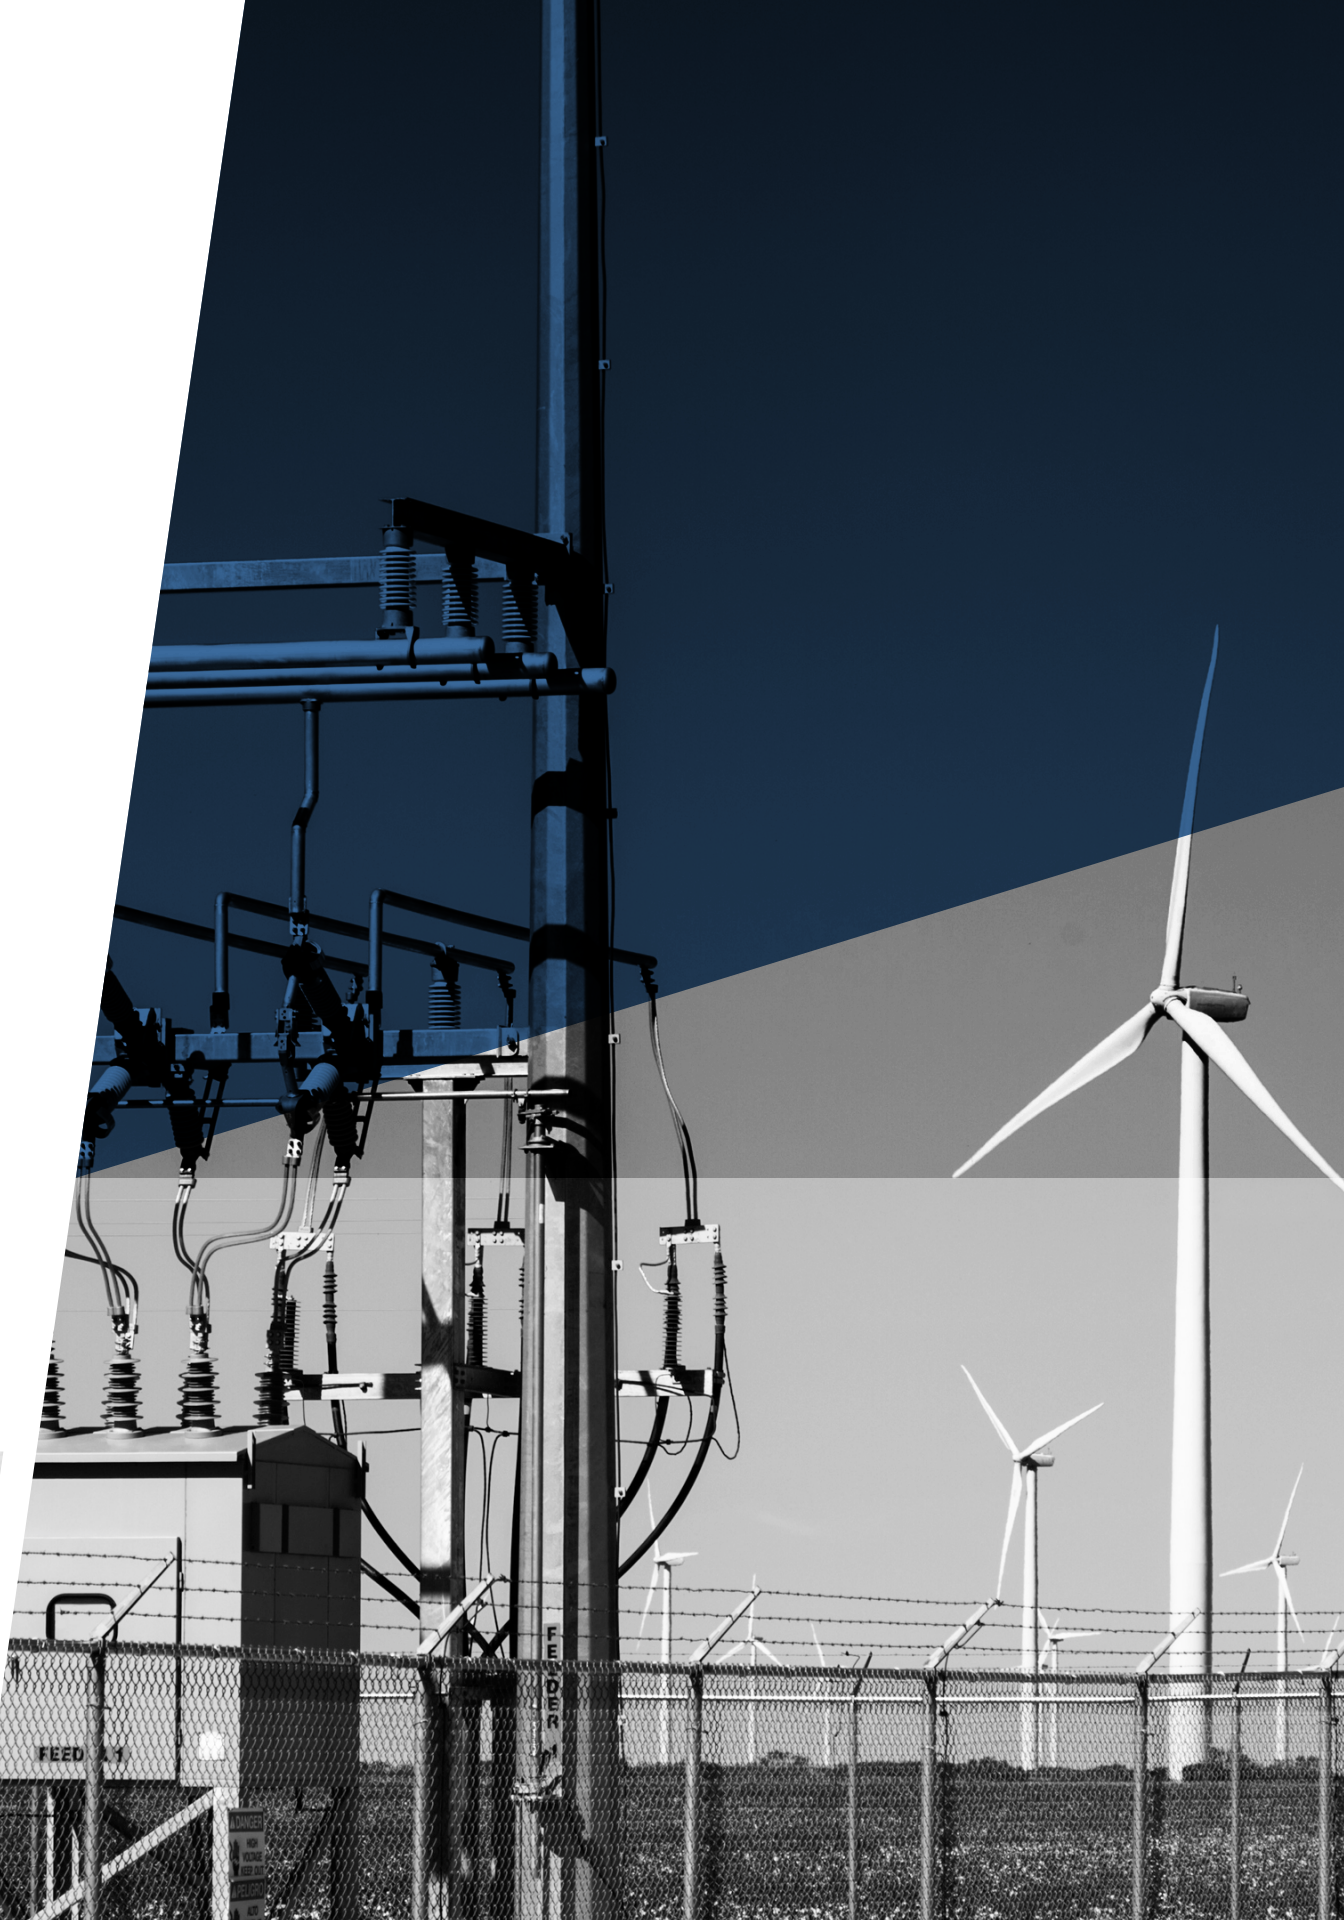

Our expertise in electrical transmission power systems makes Irby Construction a prime provider for renewable projects including wind farms, solar energy facilities and battery energy storage plants. We provide construction and engineering services for renewable energy infrastructure including:

- Integrating and connecting renewable solutions to transmission
- Building and maintaining transmission lines, above and below ground
- Interconnecting substations and generation stations
- Renewable project infrastructure construction and pole installation

SUSTAINABLE SOLUTIONS

We apply our knowledge in traditional power construction to renewable power systems. With that comes our same commitment to performance. Our team is not only highly trained but also always learning. Irby clients know our team is accountable and committed to delivering effective solutions safely. We're known for going the extra mile, problem solving, and doing whatever it takes to meet project demands.
